

## WHO MOVED MY GARBAGE? :

### A Note from Our Team Leader

Dear Community Members,

In our endeavour to improve essential aspects of communication, FS is actively working from a village that has 20 times the fertile population as compared to a remote tribal-dominated urban local body.

Our efforts are to understand and learn all that is important for solid waste management, be it the small fights over who will pick up our garbage, or the importance of needing partitions in garbage collection vehicles, and, to make a unit at the right place to convert the waste received in these vehicles into compost. FINISH Society is trying to establish and spread circular planning and management in Rajasthan.

The issues that we have placed before you in the form of case stories are some of the creative solutions to deal with the problem of garbage management instead of garbage littering.

Warm regards,

## A Catalyst for Community Transformation

Arvind Yadav, a resident of the city of Kota in Rajasthan, is a dynamic individual with a degree in Agricultural Science, serving as the President of the Devansh Housing Society for the past three years. At the age of 45, he is not only a dedicated trader but also a deeply committed to the well-being of his family and community. Arvind resides with his mother, wife, and two children, embodying the values of cleanliness and health.

## Kota's Dawn of Positive Change

In the city of Kota, Rajasthan, a dawn of positive change has brought about a transformation in the area. The DCM Shriram Foundation, in collaboration with various housing societies, initiated the “Khushhali Swachhata Pariyojana”. Among them was the Kanchanjanga Nainani Housing Society, where residents like Jyoti Khurana, Abhilasha, and Smita were grappling with a persistent issue – improper waste disposal.

**How community action revitalised GVP**

**Prof Chandar Mahabir**

It is a well-known fact that the GVP (Green Vegetable Production) scheme in the Haryana state has been successful in providing a steady supply of fresh vegetables to the urban population. However, the scheme has been facing a number of challenges in the past few years, including the decline in the quality of the produce and the increase in the cost of production. This has led to a significant loss of interest among the farmers and the urban population alike.

The GVP scheme was initiated in the year 2000 by the Government of Haryana. It was aimed at providing a steady supply of fresh vegetables to the urban population. The scheme was successful in providing a steady supply of fresh vegetables to the urban population. However, the scheme has been facing a number of challenges in the past few years, including the decline in the quality of the produce and the increase in the cost of production. This has led to a significant loss of interest among the farmers and the urban population alike.

**Mobilising sanitation solutions**

**Prof Chandar Mahabir**

When the ground water table is low, the water supply is often inadequate. This is a common problem in many parts of the world, particularly in arid and semi-arid regions. The lack of water is a major constraint on the growth of crops and the health of the population. It is, therefore, essential to find ways of mobilising sanitation solutions to address this problem.

**Organic fertilizer revolution douses stubble fire in Hardoi**

**Chandar Mahabir**

Stubble burning and the release of smoke has become a major problem in the northern states of India, particularly in the states of Punjab and Uttar Pradesh. The release of smoke is a major health hazard and a major environmental problem. It is, therefore, essential to find ways of dousing stubble fire in Hardoi.
